

# Brew For TEA

# Filter-in Bottle

## Wine bottle shaped cold brew tea bottle

Created from the idea to enjoy cold brewed tea like wine during meals, we designed the wine bottle shaped filter-in bottle. The filter is fixed onto the spout, so you can pour directly. In addition to a 750ml bottle, a 300ml bottle is now available for individual use.

Just pour tea leaves and water together inside the bottle. The filter mesh is fixed directly to the inside of the spout, so you can pour directly.

# Filter-in Bottle -Portable-

Add matcha

As a matcha shaker

## A portable filter-in bottle has just been released

The lip and body are made of PCT resin, a safe material that is BPAfree, transparent, heatproof and strong against impact. As a filter is attached, your favorite cold brewed tea or fruit tea can be carried with you.

Carry around your favorite drink, cold brewed tea, or flavored water.

A filter mesh is set inside the lip.

## A newly released square bottle stores tea in a horizontal position

This is a square bottle made of PCT resin. A filter inside the spout enables you to make cold brewed tea in the bottle. Due to its large 1,200 ml capacity, you can prepare plenty of cold brewed tea or flavored water for storage.

The filter mesh is fixed directly to the inside of the spout, so you can pour directly.

The tea can be stored in a horizontal position in a refrigerator shelf.

The bottle can be placed in the door pocket of a refrigerator.

# CHA CHA Dripper Bouquet

Steam it thoroughly first.

It drips from two small holes.

The dripper is made of Heatproof glass, so you can see the color of the tea when brewing.

## Get the best out of your specialty tea.

With different possible settings for extracting your tea, you can easily tweak your brew to your tastes. This brewer uses paper filters, creating a clear, refreshing end result.

We added printing to the holder to make it easier to understand when opening and closing the extraction hole.

## Jumping Leaf Pot

### This teapot was developed with the thought of tea leaves jumping

It is round, the shape that allows the most movement for the tea leaves to jump. Since the lid and filter come together, tea is poured with the lid on. This is a simple and functional teapot.

A lid with filter  
Can be poured  
with the lid on.

Just put tea leaves and  
hot water in the pot,  
and you can pour tea  
with the lid on.

Its round shape easily  
allows leaves to jump.

## Tea Pitcher

### Tea pitcher with a friendly feel

A tea pitcher made of heatproof glass, stainless steel and natural wood, that can be used with a casual and friendly feel.

The stainless steel strainer is  
built with a stopper that  
secures inside the glass.  
Due to the etched mesh  
design, the tea leaf is less  
likely to leak, while also  
allowing for easy cleaning.

## Jumping Tea Pot

The keyword for flavor is jumping

The secret to serving flavorful tea is to make the tea leaves jump. The round form of the Jumping Tea Pot allows the tea leaves to move and jump. The tea strainer located at the spout, which gives maximum space for the tea leaves to move.

As shown in the photo, insert the tea strainer and hook the hook onto the spout to secure it.  
\* If the spout is chipped, it can be repaired.

## Tea Warmer

Keeps tea at a delicious temperature.

The shape of the top plate was redesigned to ensure the best flavor. Even large pots won't easily stop air flow, helping the candle stay lit.

The top plate has air holes that are hard to block, making it difficult for the candle to go out.
